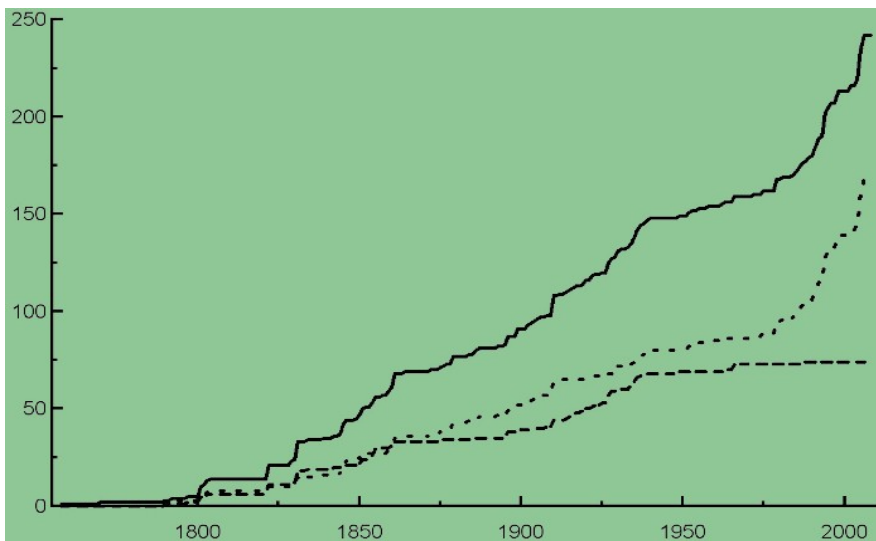

Figure 1: First descriptions curve of all labyrinthfish taxa. Solid line = total number of described species, dotted line = number of ,currently considered, valid taxa, dashed line = number of synonyms.

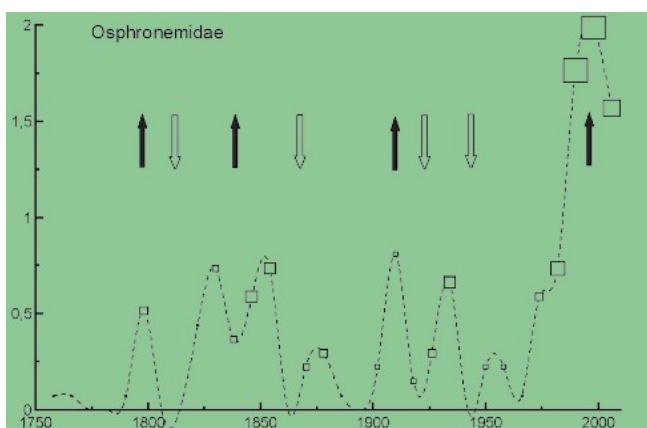

Figure 2a: Taxonomic study of the Gourami family. x-axis = year, y- axis = relative number (relative to the total number) of species descriptions, squares = number of authors.

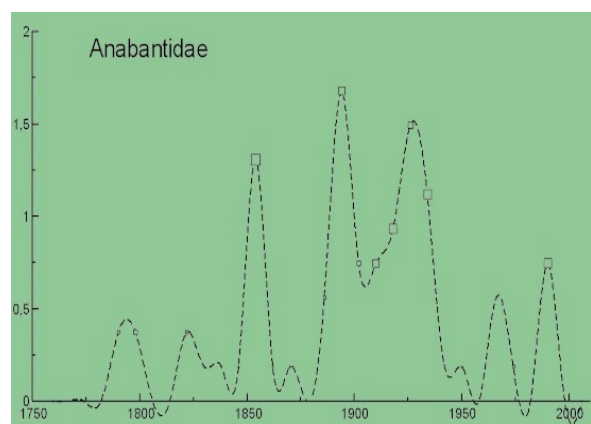

Figure 2b: Taxonomic study of the family Anabantidae. x-axis = year, y- axis = relative number (relative to the total number) of species descriptions, squares = number of authors.

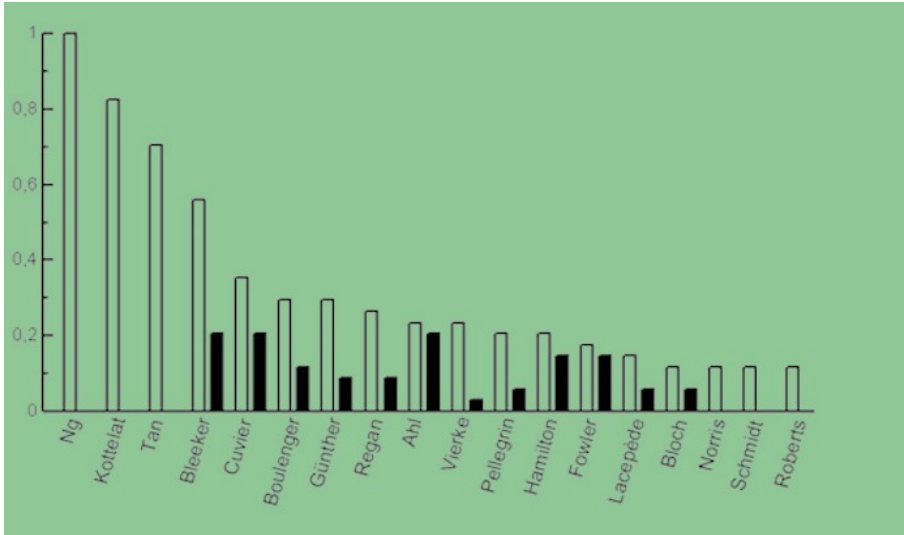

Fig. 3: The authors with the highest number of species descriptions. Open bars = total number of species, filled bars = number of taxa recognized as synonyms.
